

New Global HQ

Franklin Electric has announced that the relocation to its new World Headquarters and Engineering Centre of Excellence has been completed.

The new facility is located at 9255 Coverdale Road, Fort Wayne, Indiana, USA near Fort Wayne International Airport.

The new facility will serve as its corporate headquarters and expand its research, development, design and testing capacity.

The 10,960 square metre building will house the company's current headquarters staff of 245 employees, as well as allow for future growth. The ability to increase engineering and laboratory testing due to its state-of-the-art 2,230 square metre testing lab will facilitate long-term product innovation and growth.

In conjunction with over 20 Franklin Electric pumping products used to move and manage water within the building, the new site utilizes geothermal heating and cooling and incorporates aesthetic exterior water features to act as functional parts of the system.
